

Institutional Trading System Audit (Compact)

1. Architecture

Market Data → Strategy → Execution → Broker → Dashboard

Correct structure but lacks separation, async processing, and resilience.

2. Issues

- Monolithic system
- No DB persistence
- No broker reconciliation
- No execution lifecycle
- Hardcoded configs

3. Execution Engine

CREATE → SEND → ACK → FILLED → RETRY

Missing lifecycle tracking and retry system.

4. Strategy

ANN too small, lacks features.

Grid strategy risky in trends.

5. Risk

if drawdown > threshold: stop()

Missing kill switch and capital allocation.

6. Infra

Needs AWS/OCI deployment, async execution, low latency routing.

7. Dashboard

Needs WebSocket, live PnL, logs.

8. Roadmap

1. Stability 2. Correctness 3. Performance 4. Alpha

Final

Prototype stage. Needs execution + risk layer before scaling capital.
